Curved Slide

The 3 metre curved pool slide is our most popular slide. Apart from the extra enjoyment a curve in the slide creates it also means that it can fit in a much smaller area.

The slide has recesses for the attachment of water hoses should you prefer to have running water coming down the slide. This is not necessary but it does make the slide look more impressive and it does aid in the sliding. This recess is visible in the slide above in the middle of the "Starting Area", another smaller one is also visible in the centre of the curve.

A wide variety of colours are available, the most popular are Arctic Blue, Pacific Blue and Polypipe Yellow (a beige colour). The gelcoats used are the same as for major waterslides and swimming pools, and are U.V. stabilized, however everything left in the sun for years will fade eventually, the darker the colour the more it will fade.

- * The Slide must be placed within approximately 300mm of the water's edge
- * The Slide requires approximately 3.2m by 1.4m of space
- * The slide will seat a person up to the size of approximately 400mm width
